

I urge you to reconsider and oppose the Savi petition.

In Chicago, the 70cm. band is one of the most vital emergency communication links in the entire region, transmitting real-time weather spotting to the NWS and operating in an interconnected manner to cover the entire tri-state area.

If granted by the FCC, it will make the 70 Cm band largely unusable for Amateur operations. And if it happens there, it will probably happen in all our spectrum allocations.

Please act to prevent this disaster from becoming reality! Oppose the Savi petition!

Sincerely;  
Timothy Lanners
